ClearBridge™ is your single source of truth – powering the entire payment integrity audit workflow from data ingestion through claims adjudication and reporting.

Integrated Document Management

The ClearBridge™ M-File® integration provides a view of all medical records documentation and letter correspondence.

Secure Digital Provider Delivery

Providers connect via HubShare to review documentation online (no paperwork) and can download or upload documents. Sign-on credentials are assigned to provide a secure method for accessing and transmitting data.

Integrated Grouping and Pricing

ClearBridge™ integrates with TruCode® to give Clinical Coders the technology needed to support their decisions. This integration provides instant access to the latest coding clinics, coding references, groupers, and pricers.

Extensive Search Capability

Within ClearBridge™, users have the ability to query data using any field available within the data set. Queries can be customized, saved for future use, and shared with other users who may have a similar need.

Custom Claim Selection Engine

The Custom Claim Selection Engine contains a standard suite of edits based on the most common reimbursement models and coding clinics. In addition, our team of experts review client-specific reimbursement policies and Provider contracts and develop custom edits to identify scenarios with the highest probability for payment errors.

User-defined Claim Exclusions

Overlap in claim reviews can occur when the health plan and multiple vendors are reviewing the same claims universe, resulting in unnecessary overhead, wasted time and money, and Provider abrasion. ClearBridge™ removes the risk by systemically managing claim exclusions.

Edit Concept Summary & Statistics

ClearBridge™ provides statistics that enable its users to evaluate and track the success of edit concepts. Be evaluating edit performance, modifications can be made to improve results, when and where necessary.

Metric-based Reporting

ClearBridge™ contains metric-based reporting, which allows its users to assess, compare, and track performance of the audit workflow from start to finish. These metrics empower teams to develop game plans to support the overall business.

Custom Letter Templates

Letter templates are customized based on client specifications and timelines.
